Our products are shelf-stable, powdered mixes that require only the addition of water or milk to produce delicious frozen desserts & beverages.

MACHINE TECHNOLOGY

The machines to produce Caféttone™, Fruittone™ and Yogurttone™ are similar to slush machines with a stronger freezing compressor that chill the blends at or below -7°C (20°F) which creates a product similar to soft serve. The freezing cycles for the machines are generally 45-60 minutes. Standby mode is available for overnight storage of blends however it is highly recommended that the machines be cleaned and sanitized every two days.

There are various brands of machines that can be utilized and purchased within the industry. Our product mixes work in all the machines in the industry. Please consult your sales representative on compatible machines.
